Application Security: Every business is a software business

Andrew Kay
Application Security Solution Architect
Micro Focus

MICRO FOCUS®

Overview

Today every business is becoming a software business. Even traditional brick-and-mortar industries are facing the necessity for software-driven "digital transformation" to stay relevant and competitive in their markets.

As software becomes core to Australian business across the value chain, companies are developing and updating applications faster than ever before.

Exponential growth in application development represents both an opportunity and a threat. Research conducted by Forrester identified applications as the source of 84% of all data breaches. Why software? Because cyber criminals have identified software as the weakest link.

The Australian Government has recently passed legislation to drive a quality approach to data security. 23 February 2018, will see the introduction of the Notifiable Data Breaches Bill, which will 'strengthen the protections afforded to everyone's personal information, and will improve transparency in the way that the public and private sectors respond to serious data breaches'.

Micro Focus invites you to attend an exclusive briefing event to discuss the evolving threat environment and practical approaches to application security in the modern software development life cycle.

This discussion will feature Andrew Kay, Application Security Solution Architect for Micro Focus.

With a development background and over 12 years of experience in Software Quality and Security Assurance, Andrew is one of Australia's leading application security specialists and brings unique insight to the application challenge given his experiences in both DevOps and security.

Andrew has designed and implemented quality and secure development lifecycles for clients, performed architecture, design and code reviews, written coding standards and development policies. In his current role Andrew is responsible for enterprise and government client engagement, delivering and advising on security assurance programs and application security activity in the South Pacific region.

This will be an interactive event so we ask that you come prepared to engage with your peers as we discuss the constantly evolving threat landscape. This is a very limited seating engagement so please register ASAP to reserve your seat.

Regards,

Chris Cubbage
