Triggering and recording events

HIRSCH *by* **IDENTIV** **MOBOTIX**

- Users are alerted to view live video or easily retrieve video playback of intrusion events directly within Velocity software.
- Event trigger combinations can call-up specific cameras based on an event, or video motion detection and Activity Sensors within a camera can trigger actions within the access control system.
- On-line and off-line status of the Mobotix IP cameras, camera motion detection events and video loss are reported.

HIRSCH - Mobotix CCTV Integration
Advanced systems providing seamless interaction for powerful results

For the first time ever advanced systems in Access Control and Video Surveillance can seamlessly interact for powerful results and cost savings.

The "nXient Mobotix" integration for the Hirsch Velocity access control and security management system provides powerful integration for the Mobotix video management system. "Powerful & simple to operate", you won't miss a thing … all events contain video with full audio recording.

Real-time reporting of critical events for:

- Workplace Health & Safety
- Security / Monitoring
- Theft Shrinkage occurrence
- Compliance Issues & Audits

Event Correlation

- Be alerted to and monitor events in real-time from anywhere
- Verify alarms and dispatch appropriate security or service personnel
- Minimise risk and liability claims easily

Focus on or drill down into important video searches

- Tag specific employees access control events to trigger video recording
- Record truck loading/departure with time stamps

- Live video motion detection events – perimeter protection or within secure bonded areas
- Powerful triggers based on door access conditions, forced door alarms (break-in event), plant & equipment monitoring (Ammonia gas detection for example).

Tight integration allows you to:

Control doors, gates, turnstiles, elevators and other building equipment. Monitor users as they move around a facility, prevent unwanted access, maintain compliance and provide a robust audit trail.

- Enjoy real-time Alarm and Event triggering between systems
- Allow the operator to recall important events without having to review hours of video footage
- Change the system from simply review and storage to ACTION

Validate Identity based on access control event, photo call-up from the access control system and the CCTV image – all in real-time.

Useful for Lone worker or man-down alarm with instant access to video of the situation
